I am Emir Cerimovic and Almost Alive is eight years of drawing, coding, game designing... all done by myself. I decided to make this game and have been drawing, animating, learning how to code, and building this game with passion to have all the elements and details I want.

Inspired by classic role playing and tactical games with high development standards like Fallout 1&2, Jagged alliance 2 or Wastelands, Almost alive was my dream of the perfect tactical role playing game with a great real time combat system that features character mental sanity as one of the core elements of the game. You can explore a huge world, make friends, use or steal them, find tons of loot, make traps, sneak, destroy everything, fight smart enemies or mutants using your character skills and abilities... The simple looking real time, fast paced combat system is hiding a highly complexe engine using tons of information from your character sheet, the objects your character is using and other elements like your character moral or his sanity in order to decide of timers for a successful aim, recoil of a weapon, the maximum accuracy when walking or running while gunning, the effectiveness of a cover, etc...

If you want to play with sim racing game but your PC is very poor, then get this game. Tons of mods (FREE MODS!!), and tons of fun. Go for it ;). This game has a really cool atmosphere in almost every house, developers must work with game's optimization. Talking about Scenario, if you play much, this game will become boring. Soundtrack isn't bad. Do I recommend this game? Yes I do. buy it on sale when it costs cheaper, I do not recommend buying this at it's full price.. I agree with most of the reviews on here: This game needs some serious restructuring. I certainly don't recommend it in its current state.. I was excited to get this game on Steam as I had an older version of this game many years ago and was looking forward to an updated version. Sadly, it would not install properly, hanging up in installation. I gave up and went to bed while it was frozen on a screen, resulting in nine hours of 'play time' making it ineligible for a refund. The support site is non existent and the forums do not address this flaw. What was once a fascinating strategy game has turned into a complex of malfunctioning code. Don't waste your time or money.. Minimalistic Brilliance at it's best!

Be warned, it becomes addictive once you get over the crappy visuals.. Out of 408 games at the time of writing this, I can still proudly call this the worst purchase I've made on Steam to this day. I bought Damnation on release day due to hype, and learned a very valuable lesson -- ok, I didn't, I've still bought trash since. A few other titles have put up a hard fight to dethrone Damnation as worst game I've bought on Steam, but Damnation fought them off and still sits proudly as King on a throne of garbage.

Addition: Plenty of people have gone into what's wrong with the game, so my review doesn't need to repeat after everyone else. The point of my review is to emphasize how much I regretted the purchase and how much it disappointed me -- so badly that the day of the Steam review system launching (1648 days after buying Damnation), the very first thing I thought to do was find this particular game in my list to give it the biggest thumbs down I could.. Best Serious Sam Game on the series.. soooo good, just beautiful, everything about this game just makes me happy!. What can I get for you today?

Jerusalem.. you can go around the track and do a nascar rodeo if u want to

The route is very beautiful, and the signaling on the 37 is very fun and fresh its nice to try and it does have a cool bridge that turns!. Crashed a lot for me.. For a brand new early access game, it has bugs and glitches as to be expected. If you're looking for a title that reads 'Early Access' but plays like a finished product than this isn't for you.

It's been a lot of fun playing solo so far. I've been enjoying exploring and figuring out different aspects to the game and thinking of things to do with friends. Building our own village, killing the night stalkers, hunting, gathering...there's a lot to do.

Quests are simple and yield good little rewards but most of the game is self-made as far as experiences go. Very nice to bring friends into to do things like make your own village together.. Cute game. Add numbers, perform basic arithmetic, destroy monsters. Not much else to say really.

Got this game as part of a HumbleBundle. Not sure it's worth full price for your average casual player. If you have kids and they need to learn how to add a great, but if not, then not sure how much replayability this game really has.

It has a little strategy in terms of combining numbers and monsters in trying to get them to match, but the board itself is simple, so it does not take advantage of another features that it could. The monsters do not really have special abilities or anything, so it really just comes down to how to match monsters with numbers. So while entertaining for a while, I'm not sure how often, if at all, one would revisit this game after playing through the little main campaign. Still, worth playing at least once given its unique nature.. Played on Oculus Touch; Intel Core i5; Nvidia gtx 1070

Should you buy this?

Definitely a Yes - if you like Pinball!

It's polished and well done. So should early access be! The touch controller integration is also very well. I used the touch triggers to access left and right bat and hand to tilt the machine - really fun to play!

The 3,99 Euros are worth the experience - surely something I will keep playing here and then.

And if you like playing Pinball, also don't miss to check out the free "Pinball Inside: A VR Arcade Game"!. Clunky and unpolished, doesn't meet today's standard for games, imo. Hehe, I like this game~! <3

It's great to play when you soooo bored.
