5" thick cardboard box Risk not associated with this product. It is not the real product, but a cardboard mockup of an inferior product. The invention relates generally to a method and apparatus for distributing a workpiece within a coating applicator, such as a coater, and specifically to a method and apparatus for simultaneously distributing multiple workpieces to the coating applicator. An article, such as a medical instrument, electronic component, or semiconductor wafer, may be coated with a polymer by placing the article in a coating chamber where the article is immersed in a bath of polymer. One of several methods for immersing an article in a bath of polymer are referred to as jetting, pooling, or showering. In a showering process, a pressurized fluid, such as air, is fed into the coating chamber. When the fluid is fed into the coating chamber, the fluid is entrained by the movement of air within the coating chamber into contact with the article, which is supported on a contact surface. In particular, the fluid entrains air and forces the fluid through the air and the article, resulting in a mist that coats the article. The mist coats the article by absorbing into the surface of the article, and then dissolving into a bath of the polymer, or by coating the surface of the article by evaporation or by other means of polymer deposition.], [@[CR41]V]. Our findings may be partially due to a special mention of vernacular ethnicity in Title 11 of the Law on Marriage and Family of China (《中华人民共和国婚姻法》). Compared to the ethnic groups in Title 7, Title 11 of the Law on Marriage and Family of China (《中华人民共和国婚姻法》) provides a more elaborate protection to the ethnic minorities, such as providing separate nationality or marital nationality for ethnic minorities, and providing each ethnic group with their own official name and language as well as a special representation in government work. We found that there were more females of older age in the left-behind group, which was probably due to the age structure of the local population \[[@CR42]\]. Although the number of left-behind children did not have a significant difference, the number of left-behind children aged 12--14 years was much higher in 82157476af
